Your ZIP file is ready
The tables are clipping off the right edge of the page because standard LaTeX tabular environments do not automatically wrap long text to fit the page width.
I have created a dedicated ZIP file (VibeGuard_Tables_Fix.zip) containing the exact replacement code for the four overflowing tables mentioned in your audit report (Tables 3.1, 5.2, 5.3, and 5.5).
To fix this in your main Overleaf project, you will need to switch those tables to use the tabularx package. Here is exactly how to do it:
Step 1: Update your Preamble Add these two lines at the top of your main .tex file, right before \begin{document}:

```
\usepackage{tabularx}
\usepackage{booktabs}
```

Step 2: Replace the Overflowing Tables Change your \begin{tabular}{...} environments to \begin{tabularx}{\textwidth}{...}. Use the X column type for any column containing long text, which forces LaTeX to wrap the text dynamically.
For example, here is the corrected code for **Table 5.2 (Threshold Ladder)** that you can copy and paste:

```
\begin{table}[hbt!]
\centering
\begin{tabularx}{\textwidth}{X c c X X}
\toprule
\textbf{State Transition} & \textbf{Enter ($T^+$)} & \textbf{Exit ($T^-$)} &
\textbf{Target Configuration} & \textbf{Observed} \\
\midrule
Stage 0 → Stage 1 & 0.90 & 0.50 & Bare Arm → Bolt Only & Solid Green
\\
Stage 1 → Stage 2 & 5.80 & 4.80 & Bolt Only → Nut Added & Solid Yellow
\\
Stage 2 → Stage 3 & 10.50 & 8.50 & Heavy Unbalance Surge & Flashing
Red \\
\bottomrule
\end{tabularx}
\caption{Four-stage substrate-invariant threshold ladder and
hysteresis corridors}
\end{table}
```

(You can open the fixed_tables.tex file inside the ZIP I provided to copy the exact code for the other tables).
Step 3: Fix the Flowchart Overlap (Figure 3.5) The audit also noted that your flowchart at the end of Chapter 3 collides with the footer. To fix this, locate where you inserted the flowchart image and ensure you are constraining its maximum height. Change your \includegraphics command to look like this:

```
\includegraphics[width=\textwidth,height=0.8\textheight,keepaspectrati
o]{flowchart_image_name.png}
```

Upload the ZIP file to Overleaf to see how the tables render natively, and then copy those blocks

over to your final submission document.
